

After Bhagavan Mahavir, many great, commanding, scholarly and altruistic acharyas have enriched Jain tradition. Amongst these the name of Acharya Shri Hem-chandra Suri is written in golden letters.

Acharya Shri Hem-chandra Suri was a great man endowed with unique qualities. He was an accomplished scholar of Shrut (Jain scriptures). He enriched the storehouse of knowledge with his authentic and everlasting contributions on a variety of subjects including grammar, lexicography, dialectics, poetry, poetics, yoga, logic, and history. He was an ocean of knowledge. Besides this he enhanced the glory of Jain order by bringing Siddharaj and Kumarpal, the kings of Gujarat, under his influence and infusing love for Jainism in them. He brought about refreshing and revolutionary changes in religious, social and political fields. As a token of his respect for the unique talents of Hem-chandracharya, King Kumarpal of Gujarat honoured him with the title 'Kalikal Sarvajna'. King Siddharaj, a devotee of Shiva, always respected his scholarship, moral stature, impartiality, religious tolerance, liberalism and attitude of assimilation. His contribution towards spread of ahimsa in western India is considered unparalleled. Also, his contributions in revitalizing art, literature and culture will continue to influence centuries to come. His was the period of all-round progress of the state of Gujarat.

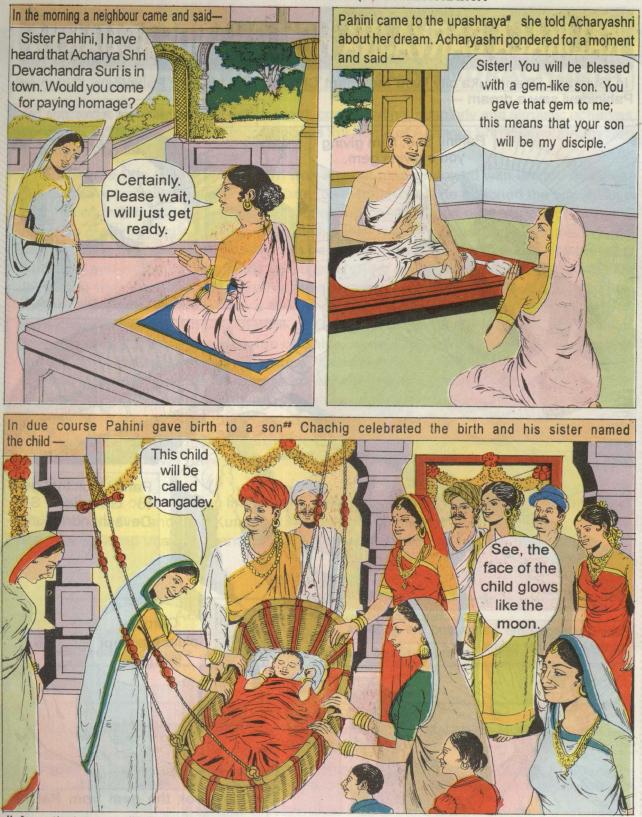

To cover the life of this towering personality in one volume of picture stories was not possible. Therefore we have spread it in two volumes. The second volume will also be published soon.

The effort of presenting important and inspiring events in the lives of Acharya Shri Hem-chandra Suri and King Kumarpal in a nut-shell in this picture story has been done by Acharya Shrimad Vijaya Nityanand Suri ji. M. We are indebted to him.

Ascetic-hostel. ## Kartik Shukla 15th, 1145 V.

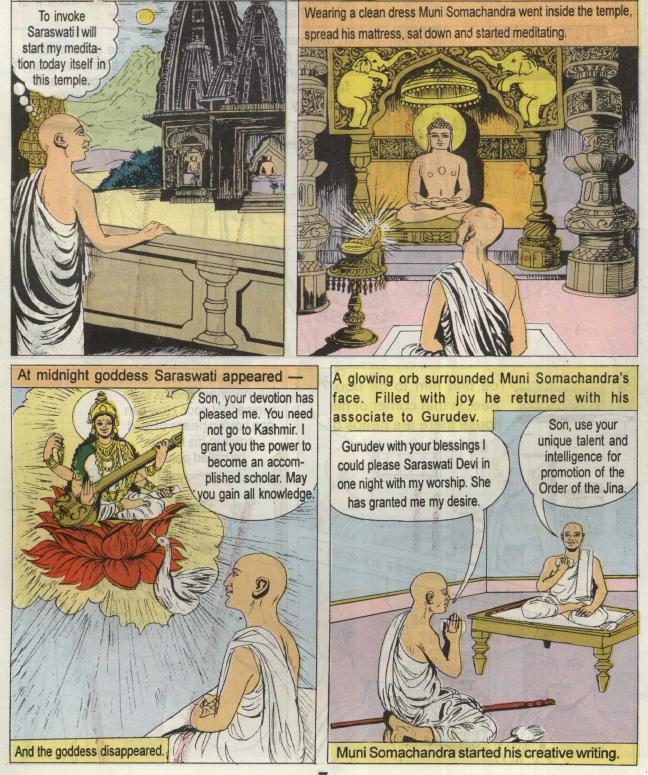

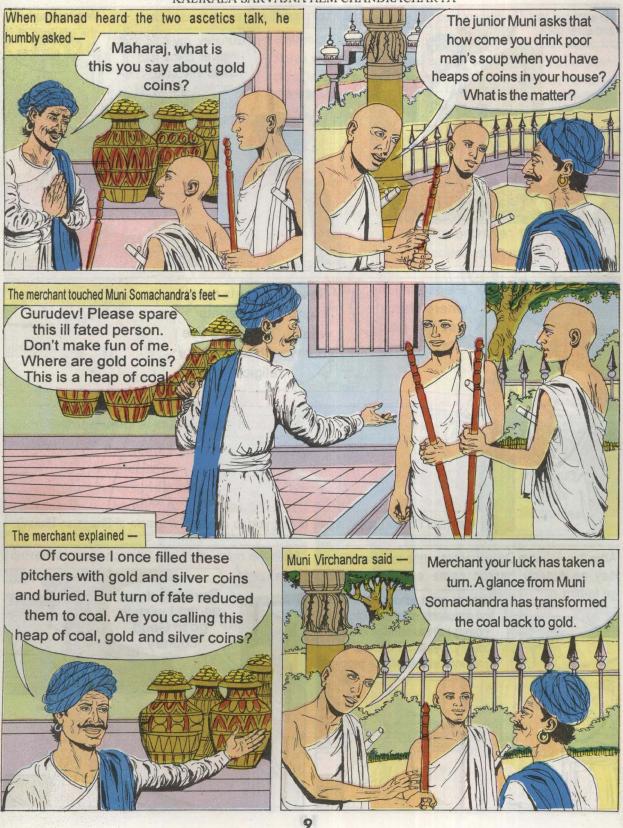

The ancient pilgrim place called Stambhan.

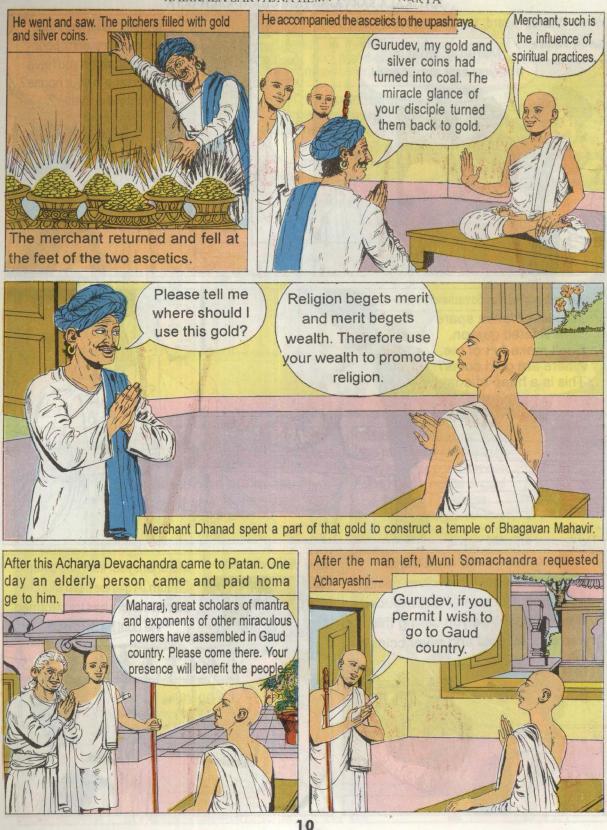

Outside Khambhat was an ancient Jain temple named Ujjayantavatar. The ascetics stayed at a nearby place. Muni Somachandra was inspired by quietude of the night —

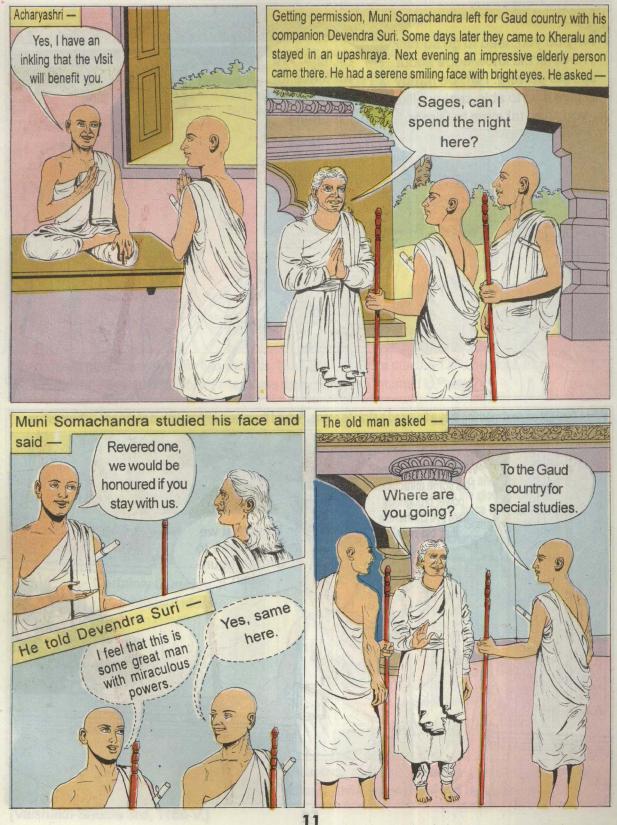

Once Acharya Devachandra came to Nagpur with his disciples. Ascetics Somachandra and Virchandra went to seek alms. They came to a huge mansion. In the large courtyard merchant Dhanad, his wife Yashoda, their four sons, four daughters-in-law and grand-children were making a thick mixture of flour and salt in water and drinking it. Muni Somachandra asked his companion — Sir, the merchant has This is the curse of time. this palatial mansion and Once a billionaire, today still the members of his he drinks poor man's family live in such soup in earthen pots and misery. Why? passes his time. 10101010 1 I tell the truth, Munivar. To me You find him to be poor? this merchant seems to be See, in that corner of his a miser not poor. How can one having heaps of gold house there are heaps of coins in his house gold and silver coins. be called poor? Muni Virchandra looked at Muni Somachandra in surprise are you saying?

Thousands of Voices uttered in unison - May the new acharya Shri Hem-chandra Suri be victorious!

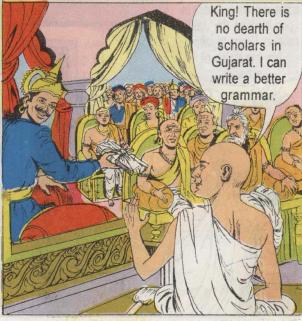

[Vaishakh Shukla 3rd, 1166 V.]

In those days in Patan, King Jaisingh Siddharaj of Gujarat, a powerful and ambitious ruler of the Chaulukya clan, was expanding his empire by conquering neighbouring states. He also conquered king Yashovarman (Bhoj) of Malava. Patan city was celebrating this victory. On this occasion Siddharaj respectfully invited Acharya Shri Hem-chandra Suri to seek his blessings. Besides many kings and courtiers, prominent sages of all religions also came to this assembly. Many kings and courtiers brought expensive gifts for Siddharaj. With the valuable diamonds, pearls, and other things brought from Malava, numerous gold-work manuscripts from King Bhoj's library were also on display. King Siddharaj said —

Malava country has excelled in fields of art, culture, and literature. Our Gujarat is second to none in wealth and bravery, but I want that Gujarat also enhances its glory in the fields of art and literature. Is it possible?

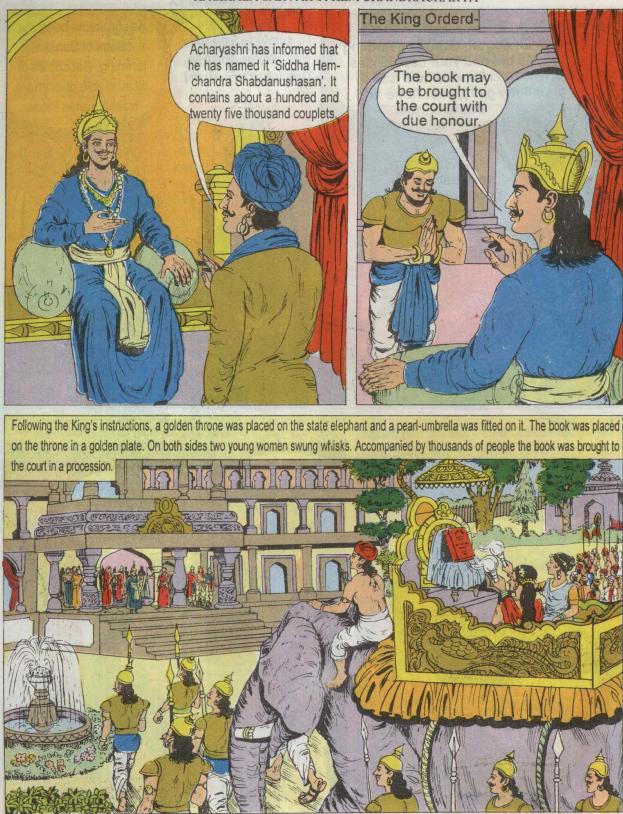

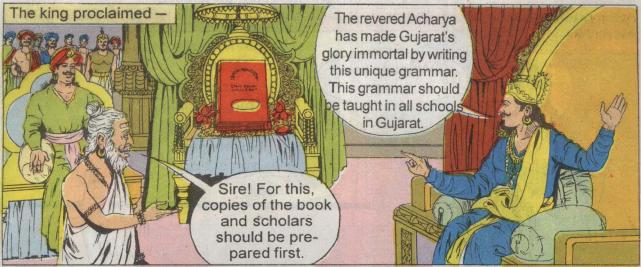

The assembled scholars looked at each other. Breaking the silence, Hem-chandracharya said —

Jain Education International

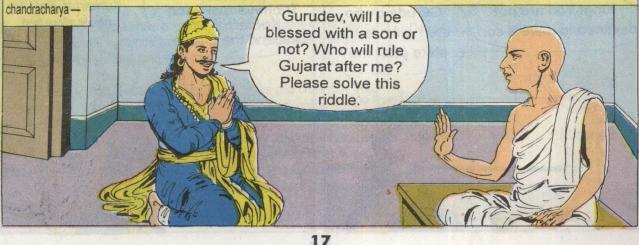

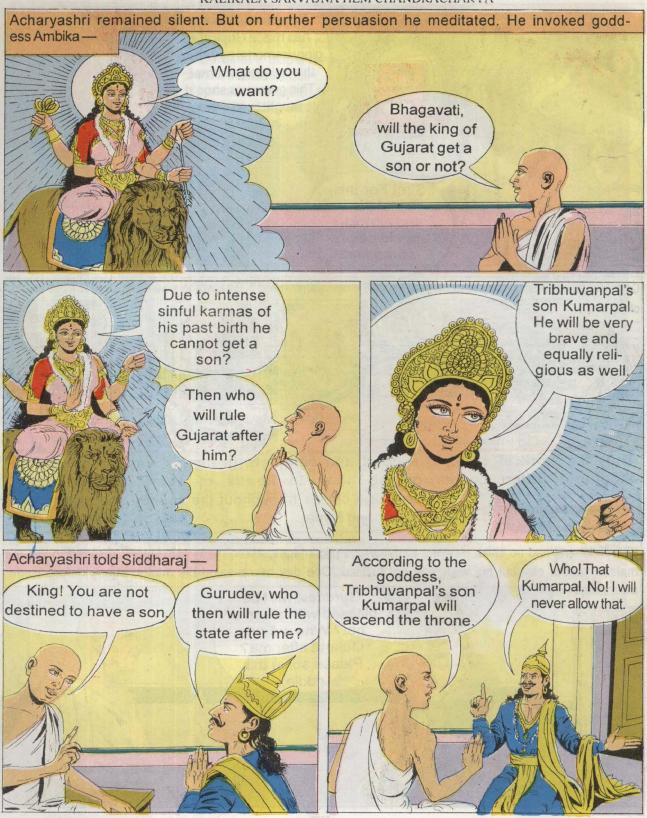

On the King's instructions many scholars were taught the new grammar and 300 transcribers were employed to make copies

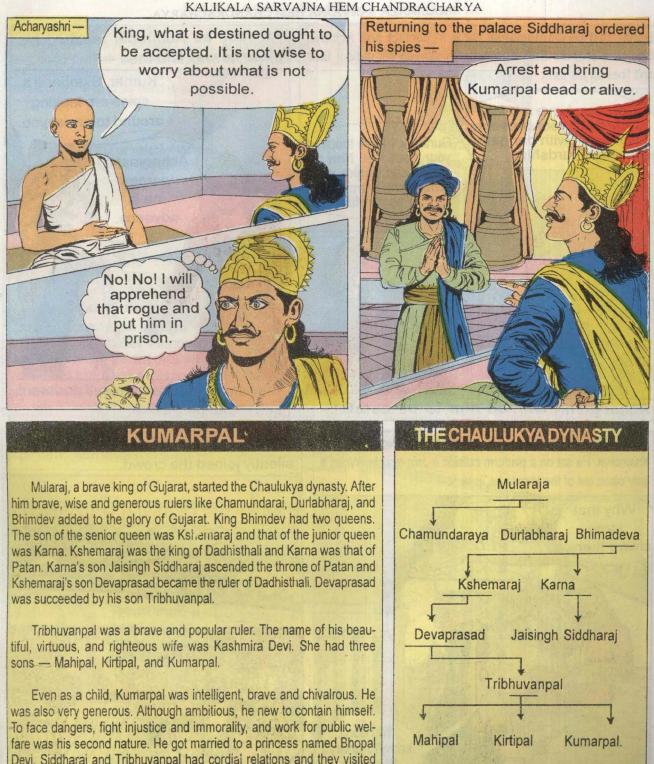

Thus the work of creating a good and complete grammar was accomplished. Siddharaj gifted copies of the book to heads of every religious sect. He also sent copies throughout the country and also to Iran, THE PROPHECY Shrilanka, and Nepal.

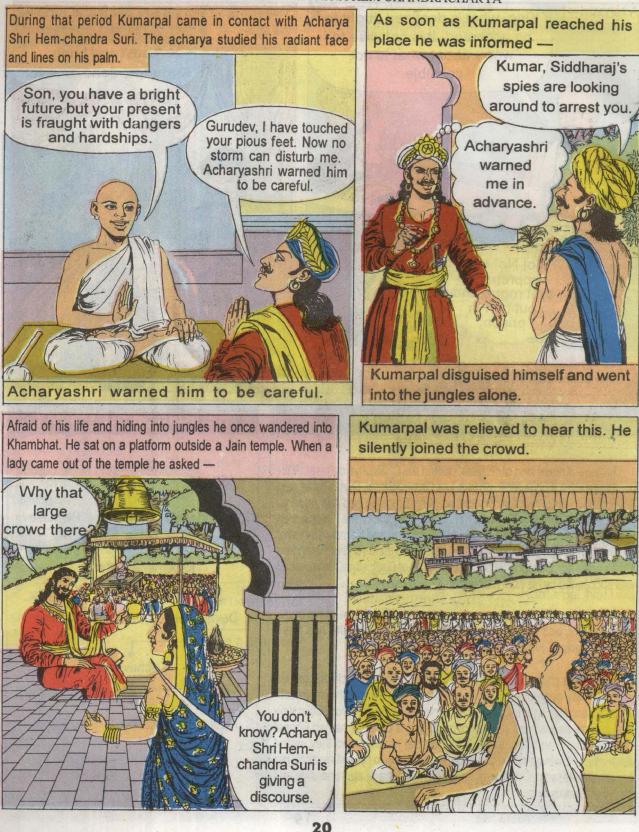

King Siddharaj had no child. He went to numerous pilgrimages; asked many astrologers; resorted to yantra, mantra, tantra, etc. but his wish was not fulfilled. One day he revealed his mental agony before Hem-

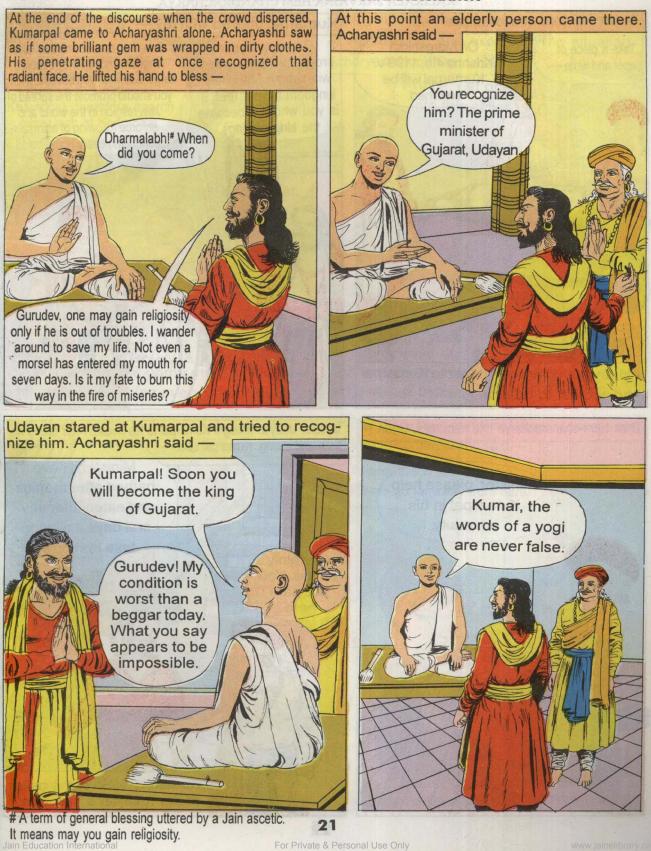

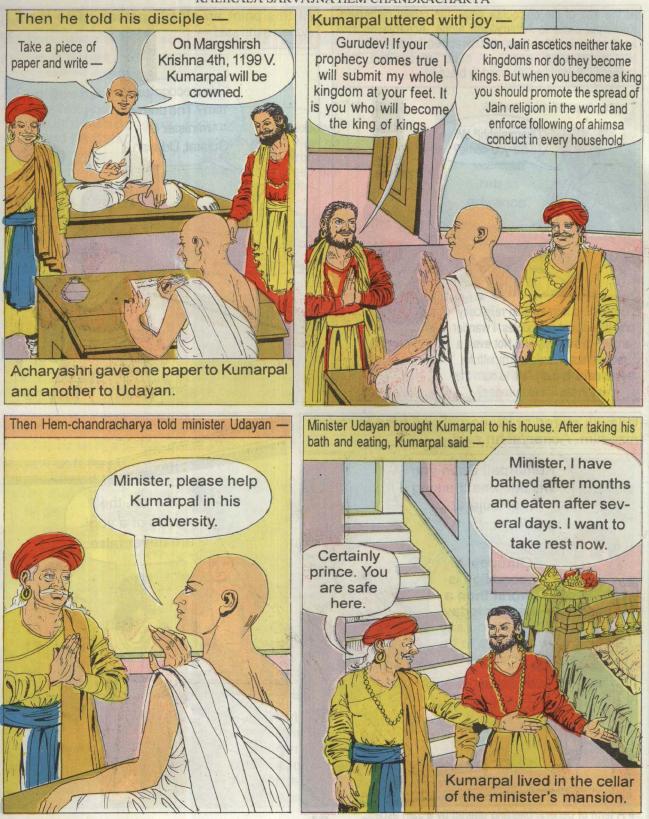

fare was his second nature. He got married to a princess named Bhopal Devi. Siddharaj and Tribhuvanpal had cordial relations and they visited each other. However, Kumarpal was very sensitive to his self respect. His bravery, fearlessness, and arrogance made Siddharaj apprehensive and cautious towards him.

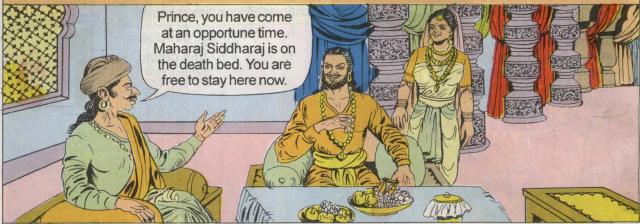

Roaming around in jungles for many days, Kumarpal one day came to Patan to meet his sister Premal Devi. His brother-in-law, Krishnadev, was a commander in the army of Patan. He told Kumarpal —

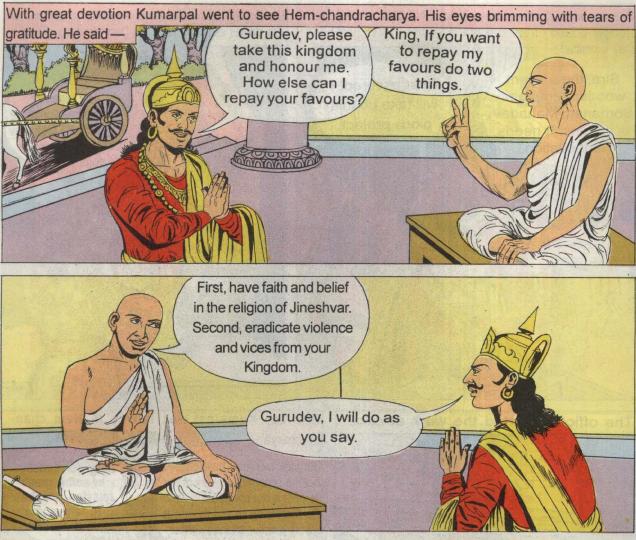

A week later Siddharaj died and the council of ministers made brave Kumarpalthe king of Gujarat.

Some days later Hem-chandracharya came to Patan. When king Kumarpal got the news he said to mini-

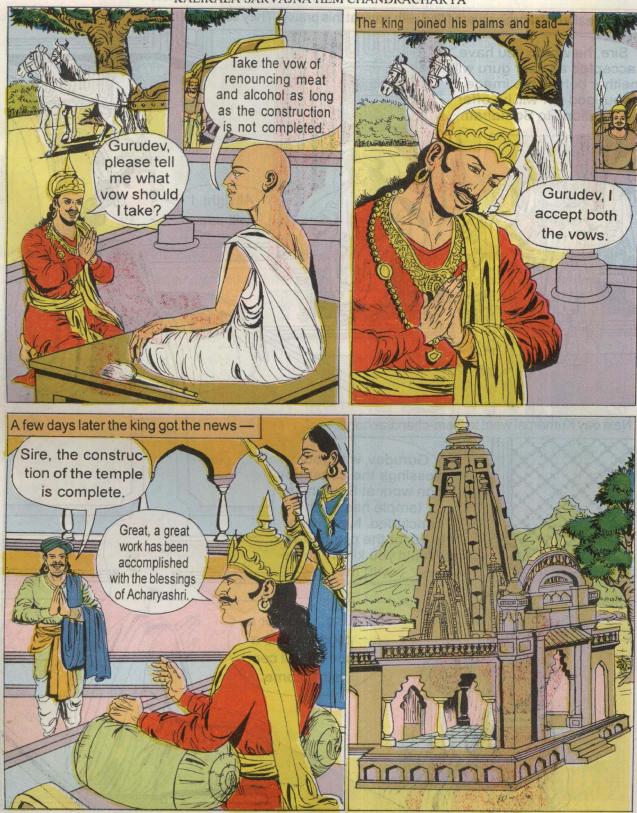

By family background king Kumarpal was a devotee of Shiva. He leaned towards ahimsa and devotion for Jina due to his coming in contact with Acharya Shri Hemchandra Suri. He was highly influenced by the generous and altruistic ideals of Acharyashri. Many of his difficult problems were solved by the yogic powers of Hem-chandracharya whose absolute selfless attitude made the king his strong devotee. When he sought the path of his well-being, Hem-chandracharya told him about two things only — devotion for the Jina and the path of ahimsa. Inspired by his devotion for the Jina, Kumarpal constructed many grand and beautiful temples. In Patan city he constructed a beautiful Jain temple where a hundred inches tall image of Bhagavan Neminath was installed and consecrated by Acharya Shri Hem-chandra Suri. In memory of his father the king named this temple as Tribhuvanpal Chaitya.

Aversion, lust, anger, illusion greed etc.

Read in second part about the contributions made by Kumarpal towards propagation of the religion of ahimsa while enhancing the wealth and glory of Gujarat with the blessings of Acharyashri.

101 Reasons WHY I'M A Vegetarian

contd.

- 36. Cattle grazing has destroyed lush ecosystems all across the North American continent. Because of the vast amount of space needed for ranching, large wild animals forced, with the help of government policy, on to marginal habitats where they die out. Wholesale extermination of predators to cattle, at taxpayers' expense, also continues unabated, which only serves to allow "pest" animals to proliferate. Tax dollars then go to poison the "pests" which leads insect populations to rise, prompting governmentsponsored spraying of insecticides. In addition, according to the GAO, livestock raising is the primary reason for the elimination or endangerment of plant species in the U.S.
- **37.** The American Journal of Clinical Nutrition and the Food and Nutrition Board recommend that eating a mere 2.5% to 6% of one's calories as protein adequately satisfies protein requirements. It is almost impossible to get below 9% with an ordinary vegetarian diet. Today's average American excessively eats 28% of his or her calories as animal protein and an additional 12% as non-animal protein.
- **38.** About 98% of all milk is produced with factory methods in the U.S. Today's factory cow is fed dangerous levels of hormones to produce two to three times more milk than yesterday's pasture cow. After about four years, the hormones no longer work and the Slaughter day will end the agony of mostly solitary, intense confinement where our friend has never seen a blade of grass. A cow naturally lives 20 years.
- 39. Cattle graze "on the house" on public lands in the U.S. Though the market rate for the right to graze is about \$ 6.40 to \$ 9.50 per month per cow, many government permit holders pay less than \$ 2 per month per cow.

According to U.S. Congressman Dick Armey of Texas, our nation's "farm cartel", much the creation of the House Agriculture Committee, is like "a 350-pound man on a life-support system." His accessment of the government subsidies to agribusiness ?: "welfare to the rich."

- **40.** Factory-farmed animals contain a much as 30 times more saturated fat than yesterday's free-range, pasture-raised animals.
- 41. Nearly half the fish tested in a 6 month investigation by Consumers Union were found to be contaminated by bacteria from human or animal feces, suspected to be the result of poor sanitation practices in one or more points along the fish handling process.
- 42. In the barnyard of yesteryear, a sow gave birth to 6 piglets a year. Today's sow gives birth to 20 with the industry working on 45. Now we have "embryo transfer" where sows, by hormone injection, produce large amount of eggs which are fertilized artificially by semen from genetically desirable boars. Embryos are surgically removed and implanted into other sows. The stress on our "super-sow" from repeatedly being cut up and sewn back will kill her prematurely. Similar methods are employed in the beef industry.
- **43.** Cow's milk is meant for calves, not humans. Even at a time of most rapid growth, an infant's natural protein needs are low. Human milk contains only 5% of its calories as protein. An infant doubles in size in 180 days. In contrast, cow's milk is 15% protein by calorie, with newborn calves doubling in size in only 47 days.
- 44. At most stockyards around the country sick and crippled animals brought in by ranchers will quickly and humanely be euthanized. At many, however, cruelty can be a regular occurrence. So called "downers" may lie suffering for days until they are dragged by

chain to their slaughter. The tragedy is that an animal can legally be kept in agony, sick or with broken bones, simply because alive it will fetch a higher price for a rancher.

- **45.** Fifteen million pounds of antibiotics are used in animal production every year. In 1988, animal drug sales came to \$ 2.5 billion.
- **46.** Meat industry apologists claim that livestock do not compete with humans for edible food because they live on forage humans cannot eat. In fact, 70% of all the grain produced in the U.S. is fed to livestock.
- **47.** Animal health in the farm of old came from exercise, sunlight and freedom to pack or root in the soil. Today, animals are packed indoors and barely kept alive with drugs and vitamin injections. The battle against bacteria in the factory farm shed is a constant concern. Misting the animals with insecticides has become routine. In the chicken house, the birds are fed chemicals to control flies which stay active in their droppings, able to kill larvae.
- **48.** The great Ogallala Aquifer, which supplies the nation's bread basket with water, is being pumped dry, primarily due to agribusiness growing grain to feed livestock. Spanning over 8 midwestern states with an area three times the size of the state of New York, this natural blessing from the last Ice Age may be gone in 30 years.
- **49.** Meat contains approximately **14** times more pesticides than plant foods; dairy products contain 5-1/2 times more pesticides than plant foods.
- **50.** There are 20-30 thousand animal drugs currently in use. As many as 90% have not been approved by the FDA.
- 51. The Physicians Committee for Responsible

To be contd.

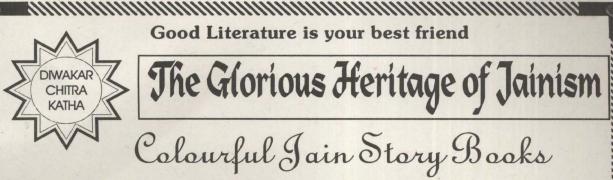

Content Courtesy:

Pamela Teisler

Medicine, a group of 3,000 physicians, came out in 1991 with the "New Four Food Groups". They are : fruit, vegetables, whole grains and legumes. Meat, poultry, fish, nuts, seeds and oils have been termed "optional" foods, not considered necessary for health.

- **52.** With every one of their natural instincts restricted and unfulfilled, pigs in today's factories will take to "tail-biting". Insane, bored and frustrated, these naturally intelligent and playful creatures may be driven to gnawing neurotically on one another's pig tails and hind ends. If not prevented, a mauled pig may die from an attack and then be eaten by his attackers. Mauled pigs cannot be sold, so they become a problem to the produce. The answer ? Pig tails are routinely amputated and pigs are kept in total darkness except for feeding time.
- **53.** The Bureau of Labor has listed poultry processing as one of the most hazardous occupations, as workers can easily contract diseases from the sick animals in their midst. Workers in the meat packing industry suffer injuries in the workplace at 10 times the national average, primarily due to damage to tendons and nerves from repeating the same motion up to 8,000 times an hour.
- 54. In egg factories all over the country, male chicks are weeded out and disposed of by "chick-pullers". A half a million chicks a day are literally thrown en masse into plastic bags where they are crushed and suffocated. Or they may be ground up while still alive.
- 55. Author and scientific director for Earth Save Foundation Michael Klapper, M.D. writes, "The price tag on the supermarket chuck steak does not include the loss of irreplaceable topsoil; yet future generations will pay dearly."

Jai Jinendra Pramoda Chitrabhanu

T he simplest and easiest way to get acquainted with Jain religion, philosophy, culture, history and way of life. Entertaining as well as informative, these picture books make the incidents from the life of the persons you revere come alive. They open up the glorious past of the Jain culture for you and your children.
